

ScanEdit Pro

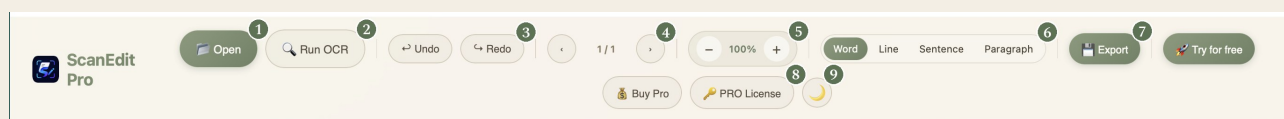

Edit the text of scanned PDFs and images, directly on your device.

WHAT'S NEW IN 3.0

- + **Multilingual OCR.** English, Italian, Spanish and French, recognised automatically.
- + **Invisible edits.** The original ink is removed and the background is rebuilt pixel by pixel, keeping the grain of the paper.
- + **Paragraphs keep their shape.** Edited lines, sentences and paragraphs stay on their original lines.
- + **Move, rotate, resize, recolour, delete.** Move any text with the arrow keys, rotate it, resize it with the handles, change its colour, or delete it cleanly.
- + **Precise pointer.** An arrow cursor for exact selection.
- + **Your file, your name.** Choose the file name before every export.
- + **Lighter, faster exports.** PDFs are compressed and optimised automatically: much smaller files, same visual quality. In the Mac app, a native engine written in Rust builds every PDF.

The toolbar

Every command you need sits in one bar at the top of the editor.

1 Open a PDF, JPG or PNG

2 Run OCR to recognise the text

3 Undo and Redo

4 Previous and next page

5 Zoom out and in

6 Selection level: Word, Line, Sentence, Paragraph

7 Export as PNG or PDF

8 Buy Pro and PRO License to activate your key

9 Light and dark theme

01

Before you start

ScanEdit Pro comes in two versions. Both keep your files on your device: nothing is uploaded, and no account is needed.

- **Web editor** at scaneditpro.com, for desktop browsers: Safari, Firefox, Chrome and Edge. It needs an internet connection to load; your documents stay in the browser.
- **Mac app** for Macs with Apple Silicon (M1 and later). Works fully offline.
- **Free mode.** Press TRY FOR FREE to edit up to 3 documents in the browser.
- **Pro.** Pro Web €19 and Pro Mac €29, one-time payment, unlimited documents. Press BUY PRO to purchase, then PRO LICENSE to enter the key you received.

02

Open and navigate

Press **OPEN** and choose a PDF, JPG or PNG.

- Multi-page PDFs open page by page: use the arrows next to the page counter to move between pages.
- Use **-** and **+** to zoom in on the details.
- The moon button switches between the light and the dark theme.

03

Recognise the text

Press **RUN OCR**. Before recognition, ScanEdit Pro cleans up the page image to make the letters easier to read. It then detects English, Italian, Spanish and French automatically and outlines every recognised word. Light text on dark backgrounds is handled automatically.

Tip: straight, well-lit scans at 300 dpi give the most accurate recognition.

04

Select

Choose the selection level in the toolbar, then click the text. Words light up as you hover over them.

- **WORD** a single word
- **LINE** a whole line
- **SENTENCE** a sentence, even across lines
- **PARAGRAPH** an entire paragraph
- Drag a rectangle across the page to select every word inside it.

05

Edit the text

The editing window opens on the selected text. You can set:

- **New text**, in the input field
- **Font**: Arial, Helvetica, Verdana, Georgia, Times New Roman, Courier New
- **Size**, in points
- **Style**: Normal, **Bold**, *Italic*, **Bold Italic**
- **Colour**, with the colour picker
- A live preview shows the result on the page while you type. Press **APPLY** or **ENTER** to confirm, **X** or **ESC** to close without changes.
- ScanEdit Pro removes the original ink and rebuilds the background around the letters, preserving the texture of the paper. Neighbouring words stay untouched, and paragraphs keep their original shape. You can reopen the same text and edit it again as often as you like.

06

Move, rotate, resize

- Drag the text by its handle to move it anywhere on the page.
- Use the **ARROW KEYS** to nudge it with precision.
- Drag the grip to resize it, and the rotation handle to rotate it.

07

Change colour

Select the text, pick a new colour in the editing window and press **APPLY**. The words stay as they are: only the colour changes. The same works for font, size and style.

08

Duplicate and delete

- **DUPLICATE** copies a word or a whole phrase, ready to be moved and edited.
- **DELETE** removes the selected text and rebuilds the background in its place, as if it had never been there.

09

Undo and redo

UNDO reverts the last change, **REDO** restores it. Every edit, move, resize, duplication and deletion can be undone.

10

Export

Press **EXPORT** and choose:

- **Current page as PNG**
- **Current page as PDF**
- **Whole document as PDF**
- PDFs are compressed and optimised automatically: much smaller files, easy to email or upload, with the page quality intact. PNG keeps every pixel, without loss.
- **Mac app:** PDFs are built by a native engine written in Rust, with mozjpeg compression. Files are smaller and long documents export faster.
- Before saving you choose the file name. In the browser a small window proposes the original name; on the Mac the standard Save dialog opens. Selection outlines and handles never appear in exported files.

Keyboard shortcuts

ARROW KEYS	Move the selected text
ENTER	Apply the edit
ESC	Close the editing window
FN + DELETE	Delete the selected text

Undo and Redo are in the toolbar. On Windows and Linux keyboards, use the Delete key.

Privacy

OCR, editing and export run entirely on your device. No uploads, no account, no tracking cookies. An independent automated audit by Legit.Show scored ScanEdit Pro 99/100, with full marks for security and privacy: top 1% of more than 13,000 services measured.
